

## Supporting Our Communities

We're making our communities stronger with more than \$1 million in contributions to local non-profit initiatives to protect the environment, promote STEM education and provide help to families in need. Our school education program reaches more than 17,000 students a year. Join us today for one of our many outreach programs, including courses in fishing or conservation gardening.

# WATERWAYS

Fall 2023

# Investing in the Future of New Jersey

Every day, we're working to ensure our customers enjoy superior water quality and reliable service. How do we do it?

By investing in infrastructure, technology and high safety standards – work that will serve families across New Jersey for generations to come.

## Main Replacements

Service reliability is always a priority for Veolia and mains have been replaced in numerous communities in recent years, including Alpine, Bergenfield, Cliffside Park, Englewood, Fort Lee, Lambertville, Paramus, Ridgefield Park, Teaneck, Toms River, Union City, Vernon and Weehawken.

## Wastewater Plant Upgrades

A \$56 million project to replace the Princeton Meadows Wastewater Plant in Plainsboro will ensure reliable service and compliance with current and future environmental standards. Treated water from the facility is used to irrigate a nearby golf course, one of Veolia's many sustainability efforts across the state.

## Water Quality Improvements

Veolia's proactive approach to exceptional water quality is demonstrated at the eight PFAS treatment systems the company has built in New Jersey. As PFAS emerged as a concern nationwide, the company instituted a rigorous testing program and began installing treatment systems to remove the substances.

## Lead Removal

Veolia has invested \$169 million in recent years to remove more than 12,000 lead service lines in 60 municipalities. We're not stopping until all the lead is removed. Every day, more than a dozen crews are in the field pulling lead from the ground.
